

SFO COMMUNICATIONS CENTER Livermore, CA

SFO ARINC

The primary mission of the SFO Communications Center is to provide communications in U.S. Oceanic Airspace to the U.S. FAA Oakland/ZOA and Anchorage/ZAN ARTCCs

ARINC, by individual contract arrangement with:

- Airlines
- Corporations
- Private Accounts

Relay messages from aircraft to/from their company (via phone, email or IATA/ICAO data) and/or make phone patches between the aircraft and their company.

Domestic Voice Service

- **HF, VHF & SATCOM ATC**
Provide voice services for aircraft in FAA-controlled oceanic airspace (safety of flight)
 - **HF, VHF & SATCOM Airline** Provide Operational Control (AOC) communications for aircraft operators in international airspace
- ## **Domestic Voice Service**
- **VHF & SATCOM**
Provide voice and ACARS services for AOC messaging and phone patching in the United States and Mexico airspace at or above 20,000 feet altitude

ARINC HF & VHF Frequencies

The SFO Comm Center can assign HF & VHF frequencies for air/ground communications with aircraft operating in the following FIRs.

- San Francisco ARINC
 - Oakland Oceanic
 - Anchorage Oceanic
 - Honolulu Control Facility
 - Guam CERAP

SFO also has the ability to send messages to FIRs other than the ones listed above.

•*Example:* If you are unable to contact Tokyo Control, ARINC can send a message to them on your behalf.

Types of HF Frequencies

- HF in Oceanic control areas is ICAO, Major World Air Route Area (MWARA)
 - Compulsory ATC type communications only
- LDOC Frequencies (Long Distance Operational Control)
 - aka “Company HF”

SFO Communication Center's LDOC Facilities

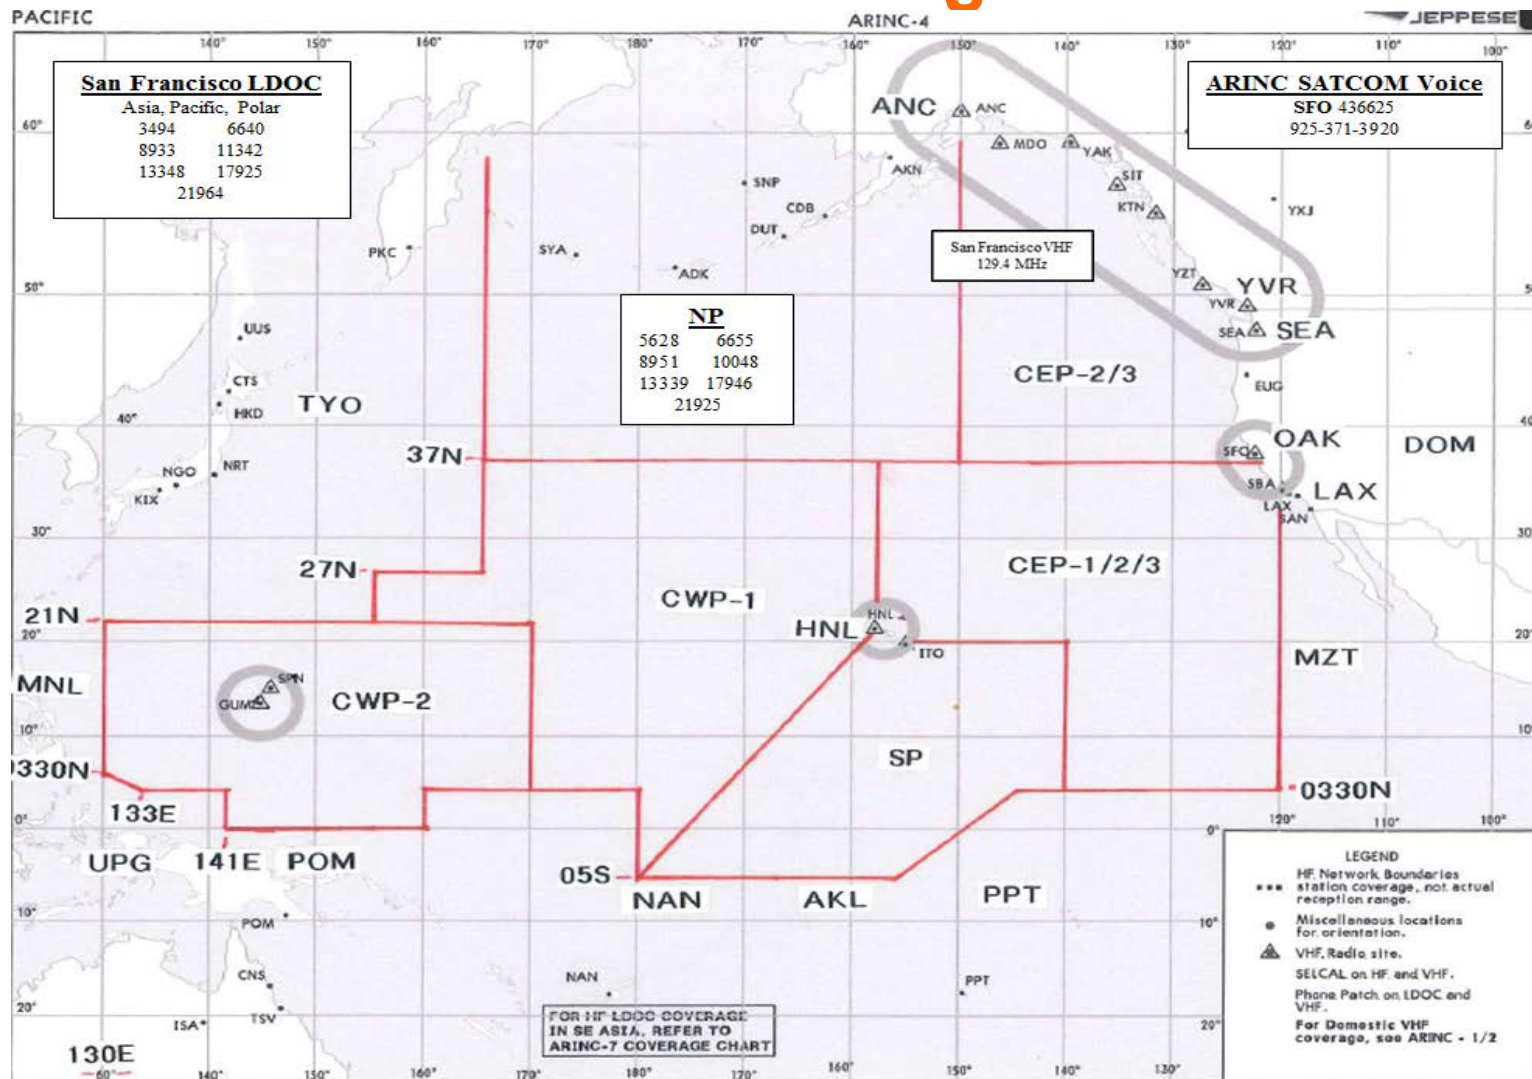

- Barrow (Barrow, Alaska 1KW)
- Guam (1KW)
- Pacific (Molokai, Hawaii 5KW)
- Dixon (Dixon, California 5KW)
- Hat Yai, Thailand/HDY (1KW)

HF/VHF Coverage Areas

SATELLITE COMMUNICATIONS

SATVoice* may be used as a communications medium if HF becomes inoperative or atmospheric conditions dictate.

Two Service Providers

1. Inmarsat

2. Iridium

When calling from either of these phones, use the same procedures and phraseology as radio calls. When calling via SATVoice, it may not be the same Radio Operator that you spoke with on HF. Your message relay however, will be handled in the same manner as if you were on HF.

SFO SATVoice - 436625

925-371-3920

Voice Communication Procedures

Helpful Communication Tips for Flight Crew

- Always use complete Flight Plan Identification:
 - Example: *“San Francisco, this is November Four-Niner-Five Victor Alpha”*
- On initial HF call, advise the frequency calling on:
 - Example: *“San Francisco, this is...on 6640”*
- Use ICAO 4444 message reporting formats and procedures
- The ARINC HF Radio Operator/RO is guarding 6 or 7 HF frequencies of an “HF Family” or “HF Group” using a split (stereo) headset. Typically the Primary (or work) frequency will be in the right ear and the Secondary (remaining guard frequencies) will be in the left ear.
 - Primary and Secondary HF frequencies for a particular Family/Group are determined by RO based on HF signal propagation/performance at that time.
